Managing in the Information Economy
 Current Research Issues

U. Apte, Naval Postgraduate School, Monterey, CA, USA; U. Karmarkar, University of California at Los Angeles, CA, USA (Eds.)

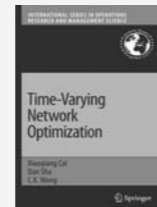

This book presents recent research directions that address management in the information economy. The contributors include leading researchers with interests in a diverse set of topics who highlight important areas and point to some important topics for future research. The book begins with perspectives at the level of the economy as a whole and then progressively addresses industrial structure, sectors, functions, and business practices.

 2007. X, 455 p. (Annals of Information Systems, Volume 1) Softcover

Network Science, Nonlinear Science and Infrastructure Systems

T. L. Friesz, Pennsylvania State University, Philadelphia, PA, USA (Ed.)

This book is written by leading scholars in Network Science, Nonlinear Science and Infrastructure Systems, expressly to develop common theoretical underpinnings for better solutions to modern infrastructural problems. The book is dedicated to the formulation of infrastructural tools that will better solve problems from transportation networks to telecommunications, Internet, supply chains and more.

Time-Varying Network Optimization

X. Cai, The Chinese University of Hong Kong, China; D. Sha, Shanghai Institute of Foreign Trade, Shanghai, China; C. Wong, The Chinese University of Hong Kong, China

This text describes a series of models, propositions, and algorithms developed in recent years on time-varying networks. References and discussions on relevant problems and studies that have appeared in the literature are integrated in the book. Its eight chapters consider problems including the shortest path problem, the minimum-spanning tree problem, the maximum flow problem, and many more. The time-varying traveling salesman problem and the Chinese postman problem are presented in a chapter together with the time-varying generalized problem. While these topics are examined within the framework of time-varying networks, each chapter is self-contained so that each can be read – and used – separately.

 2007. XVI, 248 p. 63 illus. (International Series in Operations Research & Management Science, Volume 103) Hardcover
 ISBN 978-0-387-71214-7 ► € 74,95 | £57.50

Advanced Robust and Non-parametric Methods in Efficiency Analysis
Methodology and Applications

C. Daraio, University of Pisa, Italy; L. Simar, Université Catholique de Louvain, Louvain La Neuve, Belgium

Providing a systematic and comprehensive treatment of recent developments in efficiency analysis, this book makes available an intuitive yet rigorous presentation of advanced nonparametric and robust methods, with applications for the analysis of economies of scale and scope, trade-offs in production and service activities, and explanations of efficiency differentials.

 2007. XXII, 248 p. (Studies in Productivity and Efficiency) Hardcover
 ISBN 978-0-387-35155-1 ► € 92,95 | £71.50

Hidden Markov Models in Finance

R. S. Mamon, The University of Western Ontario, Canada; R. J. Elliott, University of Calgary, AB, Canada (Eds.)

A number of methodologies have been employed to provide decision making solutions to a whole assortment of financial problems in today's globalized markets. Hidden Markov Models in Finance offers the first systematic application of these methods to specialized financial problems: option pricing, credit risk modeling, volatility estimation and more. The book provides tools for sorting through turbulence, volatility, emotion, chaotic events – the random "noise" of financial markets – to analyze core components.

 2007. XIX, 184 p. 11 illus. (International Series in Operations Research & Management Science, Volume 104) Hardcover
 ISBN 978-0-387-71081-5 ► € 74,95 | £57.50

Modeling Data Irregularities and Structural Complexities in Data Envelopment Analysis

J. Zhu, Worcester Polytechnic Institute, MA, USA; W. D. Cook, York University, Toronto, ON, Canada (Eds.)

In a relatively short period of time, data envelopment analysis (DEA) has grown into a powerful analytical tool for measuring and evaluating performance. DEA is computational at its core and this book is one of several Springer aim to publish on the subject. This work deals with the micro aspects of handling and modeling data issues in DEA problems. It is a handbook treatment dealing with specific data problems, including imprecise data and undesirable outputs.

 2007. VII, 334 p. 60 illus. Hardcover
